

2024 Severe Weather Summary

mediazilla.com/z1s2t13vAO

Weather Trends International’s **YEAR-AHEAD 2024 Severe Weather Outlook** accurately hit almost every peril that resulted in a devastating year. In our January 2024 outlook video, we projected the **most tornadoes in 13 years**, that happened. **Worst flooding since 1993**, that happened in many areas from the Northeast and Midwest in the Spring and Texas to the Southeast in late Summer. One of the **most destructive hurricane seasons since 2017** that ranked 4th in 174 years with 5 landfalling hurricanes. **Wildfires the worst in 4 years**, up +216% over last year, and the worst in 4 years. **Are you ready for a dramatically different cycle in 2025** with very different peril risks?

Sample Quarterly Global Severe Weather Report

The **YEAR-AHEAD 2025 Severe Weather quarterly reports** help you better assess the risk across 10 perils both in the U.S. and around the World.

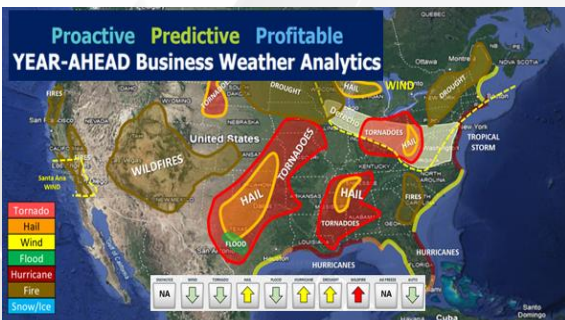

The big theme for 2025 will shift away from floods and tornadoes with fires, droughts, hail and hurricanes the big risk factors.

Why Weather Trends?

Chuck Grom, CFA, CPA
Gordon Haskett Equity Research

“Because WT360 has been right 10-15 years, WTI sticks to their forecast, don’t change their minds 6, 12 months out, as a result, they’ve been instrumental to our work.”
